

SE 492 Biweekly Report

Group 12

Make Recipes Readable Again

Client/Advisor: Mat Wymore

Team Members:

John Paton - Team Lead

Brett Knous - Meeting Scribe

Luke Knous - Test Facilitator

Vismay Gehlot - Design Facilitator

Rithwik Gokhale - Report Facilitator

Weekly Summary: Vismay, Rithwik, and Luke worked together on the frontend design while John and Brett focused on creating functional requests from websites to be parsed and have data extracted.

Past Week Accomplishments: John and Brett made more progress on the web-scraping front and Vismay, Rithwik, and Luke finished a base layout of the pages in front-end

Individual Contributions:

Name	Individual Contributions	This week's hours	Cumulative hours
John	Created function to fetch HTML from recipe websites. This will allow us to now parse through the data for relevant information to display	10	32

	to end users.		
Brett	Continued to work on implementing a solution to the problem of making http requests with React. Jack ended up finding the solution though. Began integrating the backend functionality with a React project.	8	32
Luke	Continued work on design decisions and started the process of narrowing choices for color scheme (a popular choice is orange and grey). Helped a team member set up front end environment.	9	32
Vismay	Created a fully functioning initial front-end page for our application, which includes a welcome screen as well as a section where the information will appear, and finally buttons to tweak the output to user preferences.	12	29
Rithwik	Assisted team member in setting up front end environment and went over a review of basic layout, color scheme, etc. Aided in developing a page of the front end	10	29

Plans for the upcoming week:

- Connect front-end pages together and make sure they can be tabbed through using gestures or buttons on screen.
- Test the front-end using dummy data.
- Create methods to parse data from extracted HTML to be sent to the app's backend.
