

SE 492 Biweekly Report

Group 12

Make Recipes Readable Again

Client/Advisor: Mat Wymore

Team Members:

John Paton - Team Lead

Brett Knous - Meeting Scribe

Luke Knous - Test Facilitator

Vismay Gehlot - Design Facilitator

Rithwik Gokhale - Report Facilitator

Weekly Summary: We all worked together and ended up with a working demo that performed the main functionality of our project. We now simply need to refine and add extra functionality.

Past Week Accomplishments: Front end, back end, and web scraping components all finished main functionality and are connected and working together.

Pending issues: We need to add extra functionalities, such as ingredient scaling and font size changing.

Individual Contributions:

Name	Individual Contributions	This week's hours	Cumulative hours
John	Put all components together to make a working app with main functionality completed.	10	50

Bret	finished migrating JSON storage to using react native libraries. Integrated the storage into the demo project to use. Started working on slideshow for final presentation.	12	58
Luke	I worked on implementing functionality to switch between both of our app's pages. Resolved a local repository issue which prevented me from pushing to remote repository. Did research and work on possible designs to create a more professional and clean app. Started working to make the app use the url entered on the first page to get information.	14	53
Vismay	worked on integrating extra features such as recipe scaling and changing font size as well as more research and thought into potential design changes that would allow the application to look more professional	10	48
Rithwik	Since our last team meeting and report, I have been working on implementing the logic to display cooking instructions on the app's second	8	44

	page. These instructions will be grabbed from the backend and printed in the text box. The logic is similar to the implementation used for the ingredients section of the text box.		
--	---	--	--

Plans for the upcoming week:

- Complete instructions implementation and test with a range of websites which have different lengths/sets of cooking instructions.
- Add font size changing
- Add ingredient amount scaling

Advisor meeting summary: Application was demonstrated and functional.
